

K8s useful Commands

Deleting namespaces that stuck in terminating state:

```
kubectl get namespace "terminating namespace" -o json | tr -d "\n" | sed "s/\"finalizers\": \[[^\]]+\]/\"finalizers\": []/" | kubectl replace --raw /api/v1/namespaces/"terminating namespace"/finalize -f -
```

Making storageClass default:

```
kubectl patch storageclass <storageClass-name> -p '{"metadata": {"annotations":{"storageclass.kubernetes.io/is-default-class":"true"}}}'
```

Deleting Terminating pvc:

```
kubectl describe pvc PVC_NAME | grep Finalizers  
kubectl patch pvc PVC_NAME -p '{"metadata":{"finalizers": []}}' --type=merge
```
